

Flowmeter with float

Advantage

- measuring ranges graduated in line with practical requirements according to DIN
- face-to-face dimension = type designation 165 mm
- face-to-face dimension = type designation 170 mm
- face-to-face dimension = type designation 185 mm
- face-to-face dimension = type designation 200 mm
- face-to-face dimension = type designation 335 mm
- face-to-face dimension = type designation 350 mm
- measuring accuracy according to VDI/VDE 3513
- materials with reduced moisture absorption increase the measured value stability
- process automation using optional components such as flow data sensor ZE 3000 or limit reed switches ZE 950/ZE 951
- special scales according to the medium property

Application

- chemical plants
- water treatment

Measuring Principle

- The medium – water, air, fluid or gaseous chemicals – flows vertically through the flowmeter from the bottom to the top. The float is lifted frictionless by the flow forces and directly indicates the flow volume specified on the measuring tube scale with its top read-off edge (maximum diameter).

Version

- The conical measuring tube is equipped as standard with a measuring scale in l/h for water at 20°C. It is fitted with external dovetail strips with two moveable setpoint indicators for visual marking of the minimum and maximum flow volume or for accommodating flow data sensor ZE 3000 or limit reed switches ZE 950/ZE 951.
- The measuring tube contains the float, made of PVDF as standard, as well as the float trap.

Measuring Range

- see table measuring range

Flow Media

- Technically pure, neutral or aggressive fluid or gaseous media, provided that the valve components coming into contact with the media are resistant at the operating temperature according to the ASV-resistance guide!
- Attention: A PVC measuring tube cannot be used for gaseous media.

Nominal Pressure (H_2O , 20°C)

- PN 10

Fluid Temperature

- see pressure-/temperature diagram

Operating Pressure

- see pressure-/temperature diagram

Size

- DN 10 - DN 65

Viscosity

- for media differing from H_2O
- DN 10 - DN 40: max. 200 - 350 mPas
- DN 50 - DN 65: max. 500 mPas

Measuring Accuracy

- Class 4 according to VDI/VDE 3513, page 2
- VDI = Association of German Engineers
- VDE = Association for Electrical, Electronic & Information Technologies

Float

- PVDF without magnet
- PVDF with liquid-tight sealed magnet for electronic measurement

Sealing

- FPM
- EPDM

Connection

- Measuring tube: PVC-U, PA, PSU DIN 8063 union with union socket end for solvent welding DIN ISO (PVC-U)
- Measuring tube: PVDF union (special thread) with union socket end for fusion welding DIN ISO (PVDF)
- union end with female thread (GTW/VA) on request
- union socket end for fusion welding DIN ISO (PP/PE) on request

Mounting Position

- vertical

Flow Direction

- from bottom to top

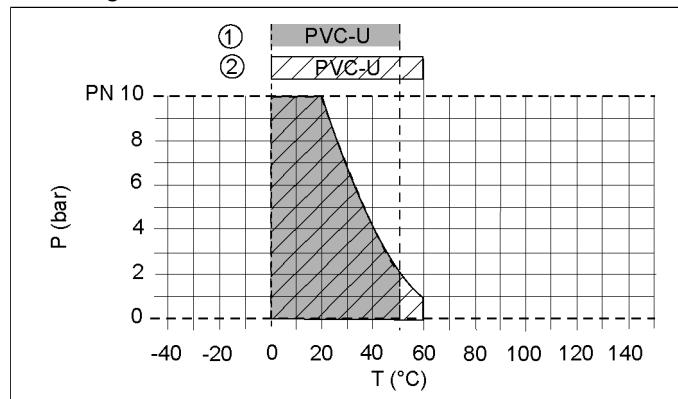

Accessories

- Special scales
- Flow data sensor ZE 3000 for process automation
- Limit read switch ZE 950, ZE 951 for minimum or maximum flow measurement for process automation

Operating note

Safe operation of the valve can only be ensured if it is properly installed, operated, serviced or repaired by qualified personnel according to its intended use while observing the accident prevention regulations, safety regulations, relevant standards, directives/technical regulations or codes of practice such as e.g. DIN, DIN EN, DIN ISO and DVS*. *DVS = German Welding Society The intended use includes adhering to specified limit values for pressure and temperature, as well as checking the resistance. This requires all components coming into contact with the medium to be "resistant" in accordance with the ASV resistance guide.

Attention:

A PVC measuring tube cannot be used for gaseous media.
